RE-AUDIT · ROUND 2 · EFORTE-IO-NEW.VERCEL.APP

eForte Site Audit

Every finding from the 24 September audit re-tested against the rebuilt site, plus a fresh pass over metadata, schema, rendering, responsive behaviour, and copy. The case-study content was excluded from this round at your request.

Re-audited **13 Oct 2026** Previous findings **34** Verified fixed **15** Console errors **0**

Verdict: the SEO layer is transformed; two reputational criticals remain untouched

This was a serious fix pass. All 101 pages now carry unique titles and descriptions, Open Graph cards with a generated 1200×630 image, self-referencing canonicals pointing at eforte.io, and Organization/WebSite schema sitewide with Article and breadcrumb markup where it belongs. The hero renders instantly, `/case-studies` 301s to `/impact-studies`, the footer now has a real address and email, an `/llms.txt` exists, and nearly every language error from round one is gone. The copy pass in particular was thorough — hyphenation, the Prophet-derived Prism description, the reviews heading, duration formats: all fixed.

What has not moved: the homepage still presents Google, PayPal, Slack, Shopify, Figma, Ripple, OneSignal, Land id. and AWS as "industry leaders" who trust you, and the seven certification claims still carry no evidence. Those two are launch blockers independent of the case-study question. `/databricks` is also unchanged and still contradicts the rest of the site.

01 Status board — all 34 findings

Each re-tested 13 Oct

ID	FINDING	STATUS	VERIFIED THIS PASS
C-01	robots.txt blocks all crawlers	VERIFY AT LAUNCH	Preview still blocks everything (now also ClaudeBot/anthropic-ai — good for a preview). Correct *if* production emits an allow file; that cannot be confirmed from this domain. Test eforte.io/robots.txt within the hour of cutover.
C-02	37 synthetic case studies	DEFERRED	Unchanged by request. Note the homepage's featured case study still links to `/case-studies/bioresearch-labs`, one of the synthetic set — if the studies stay for now, at least swap the homepage feature to Krank or Oddysee.
C-03	Third-party logos as "industry leaders"	OPEN	Strip still renders Land id., Figma, Ripple, Google, Shopify, OneSignal, Slack, PayPal, AWS under "Trusted by industry leaders", three times in a marquee. The trademark exposure is unchanged.
C-04	Unevidenced certification claims	OPEN	All seven claims still present (SOC 2 Type 2, ISO 27001, NIST AI RMF, IBM, Expertise.com, CAIDP, HIPAA), still without certificate numbers, dates or links.
H-01	48 case studies share one title	FIXED	Every case study now has "{Client} Case Study | eForte" plus a page-specific description and breadcrumb schema. Verified on krank, oddysee, brightwell-mutual.
H-02	AI pillar pages had no metadata	FIXED	/velocity-ai and /agentic-orchestration both carry proper titles, descriptions, OG and schema.

H-03	Hero invisible for seconds after load	**FIXED**	H1 computed opacity is 1 immediately on a fresh load, desktop and mobile.
H-04	No Open Graph / Twitter tags	**FIXED**	Full og: and twitter: sets on every page checked, with a working generated 1200×630 image endpoint. URLs correctly absolute to eforte.io.
H-05	No canonicals; duplicate route	**FIXED**	Self-referencing canonicals to eforte.io sitewide; /case-studies now 301s to /impact-studies.
H-06	No structured data	**FIXED**	Organization + WebSite sitewide; Article + BreadcrumbList on blog posts; BreadcrumbList on case studies. Only JobPosting on the two role pages is still missing — worth adding for the Google Jobs panel.
H-07	Sitemap gaps	**PARTIAL**	All 8 blog posts added (now 97 URLs). Still missing: /reviews, the white paper, and both careers role pages — three of your most valuable URLs.
H-08	Contradictory locations	**PARTIAL**	/locations rebuilt around Wilmington, San Jose and Austin — now consistent with /about-us, Chicago/Nashville/Montevideo/Cali gone, "NIL" gone. Still on the page: "over 20 years" against the 2013 founding, and an industry list (oil & gas, e-learning, real estate) the site doesn't serve. Karachi still appears nowhere except one job description.
H-09	/databricks contradicts the site	**OPEN**	Unchanged: "Gold Partner", "20+ years", "250+ certified professionals", and the Communications/Media/Gaming specialisation are all still there.
H-10	Contact path unverified	**PARTIAL**	Footer now shows the Wilmington address and hr@eforte.net — a real fallback exists. The modal submission itself remains untested, and the only public email is an HR inbox; sales enquiries deserve their own address.
H-11	8 case studies unlinked	**DEFERRED**	Travels with C-02.

M-01	Footer links all → /blog	PARTIAL	"White Paper: Navigate AI Adoption" now links directly to the paper, and Events is removed. AccelerateAI, Data & AI, Agentic Factory, Cybersecurity and Databricks still all land on /blog — and the Databricks label still bypasses the real /databricks page.
M-02	3 social links href="#"	OPEN	Still three unlabelled "#" anchors in the footer.
M-03	Case-study template bugs	DEFERRED	Travels with C-02 (stray quote glyph, empty tech columns, dual intros).
M-04	Stripped hyphens	FIXED	All six tested compounds now hyphenated on /technology-partners; /about-us clean.
M-05	"Satisfactory reviews of clients"	FIXED	Now "What our clients say".
M-06	Prism copy lifted from Prophet docs	FIXED	The Prophet sentence is gone from /reviews.
M-07	Feedback summaries with no feedback	OPEN	Ce-trainer's summary still restates the project description, and Insurance Market's description still appears twice on the page.
M-08	Mobile horizontal overflow	OPEN	Still 393px scroll width in a 375px viewport — the same 18px overflow from the fixed nav's scrollbar-width padding.
M-09	Unlabelled buttons, missing alt	OPEN	Still 8 of 22 homepage buttons with no accessible name; logo-strip images still alt="".
M-10	No contact details anywhere	FIXED	Footer: "eForte Solutions · 1207 Delaware Ave, Suite 2858, Wilmington, DE 19806 · hr@eforte.net".
M-11	Values differ about-us vs careers	FIXED	Careers now carries the same list, including "Inventive and Resourceful".
M-12	"Senior Polymaths"	FIXED	Term removed from /careers.

M-13	Missing full stop + contradiction	FIXED	Sentence punctuated and reworded.
M-14	Punctuation in headline copy	FIXED	"logos on a slide" sentence repaired; mid-sentence title case gone; dashes consistent.
M-15	Reviews formatting inconsistencies	FIXED	Durations normalised to "N months"; "govt." spelled out; domain spacing corrected.
M-16	Marquee content duplicated in DOM	FIXED	Duplicate logo-strip and timeline tracks now carry aria-hidden="true".
M-17	Unused preloads, raw TTF font	NOT RE-VERIFIED	No errors in a clean console this pass; run Lighthouse on production to confirm the preload list.
M-18	Thin careers / white-paper volume	BACKLOG	Still two open roles and one paper. Content growth, not a defect.
M-19	"Incredible clients" section	CHECK VISUALLY	Heading still present on /about-us; confirm the logo grid beneath it actually renders populated.

02 What still blocks launch

Two decisions and one env check

CRITICAL C-03 · unchanged

The logo strip is now the single biggest risk on the site

With the metadata fixed, social cards working, and schema telling every crawler exactly who eForte is, this build is finally ready to be seen — which makes the "Trusted by industry leaders" strip more dangerous, not less. The first thing a prospect, a journalist, or Google's own brand team sees under your hero is nine wordmarks you presumably have no client relationship with, looping three times.

Decision needed: real client logos with written permission, or delete the strip and promote the reviews. This is an afternoon of work either way.

CRITICAL C-04 · unchanged

Certification claims still have nothing behind them

SOC 2 Type 2, ISO 27001, NIST AI RMF, IBM Global Entrepreneur, Expertise.com "A", CAIDP, HIPAA

— all still asserted, none evidenced. Everything else on the site got more credible this round, so these now stand out more.

Decision needed: per claim — attach certificate number, auditor and date, or remove it.

CRITICAL C-01 · verify at cutover

robots.txt — correct today, unverifiable until launch

The preview still blocks everything, which is exactly right for a preview (and it now blocks AI crawlers too). Whether production emits the allow version is decided by code I cannot see from this domain. The sitemap and the new llms.txt both assume eforte.io will be crawlable — if the block ships, every other fix in this round is invisible.

Checklist for launch day: curl eforte.io/robots.txt → expect Allow + a `Sitemap:` line · submit the sitemap in Search Console · confirm /llms.txt serves · keep the vercel.app preview blocked permanently.

03 The short remaining fix list

Roughly a day of work

- **Sitemap (H-07):** add /reviews, /white-papers/navigate-ai-adoption, and the two careers role pages. Four lines.
- **/databricks (H-09):** still claims Gold Partner, 20+ years, 250+ certified staff, and a media-and-
